

SIMATS ENGINEERING

ASSESSMENT TOOL 3

COURSE NAME: INTERNET PROGRAMMING

COURSE CODE: CSA4305

COURSE OUTCOME COVERED

CO 5: Construct interoperable web services by leveraging JAX-RPC, WSDL, SOAP, and XML Schema for seamless data exchange across distributed systems. (L4, L5)

Assessment Tool: Viva Voce

Weightage: 10%

QUESTIONS:

Total Marks: 20

1. Define SOAP.
2. Define WSDL.
3. What is an API?
4. Define XML Schema.
5. What is a Web Service?
6. Define REST.
7. What is a Protocol?
8. Define Endpoint in web services.
9. What is a Service in web applications?
10. What is the difference between SOAP and REST?
11. What is the role of WSDL in web services?
12. What is JSON and how is it used in APIs?
13. What is HTTP and why is it used in web services?
14. What is meant by request and response in web communication?
15. What is the importance of XML in web services?
16. What is the purpose of an API endpoint?
17. What is the difference between HTTP and HTTPS?
18. What is meant by RESTful services?
19. What is a namespace in XML?
20. What is the role of a client and server in web services?

Code of Conduct:

I Aaron Samuel S (192411022) (Name / Reg No) certify that this submission is my original work and that I have adhered to the guidelines specified for this assessment.

I understand that any violation of academic integrity rules will result in disciplinary action.

RUBRICS FOR CALCULATION:

Criteria	Weightage	Level 4 (Exemplary)	Level 3 (Proficient)	Level 2 (Developing)	Level 1 (Beginning)
Conceptual Understanding	25	Demonstrates deep understanding of concepts with complete clarity	Explains concepts correctly with minor gaps	Partial understanding with errors or omissions	Unable to explain basic concepts
Application	25	Effectively applies concepts to new situations; solves problems logically	Applies concepts with minor errors	Limited ability to apply concepts; requires guidance	Unable to apply concepts effectively
Analytical Thinking	20	Critically analyzes scenarios with strong justification and reasoning	Provides reasonable analysis with some justification	Superficial analysis with weak reasoning	No analytical reasoning demonstrated
Communication	15	Communicates ideas clearly, confidently, and with appropriate terminology	Communicates clearly but with minor hesitation	Communication lacks clarity or structure	Unable to communicate ideas effectively
Response to Questions	15	Responds accurately and confidently, extending answers with depth	Responds correctly but with limited depth	Responds partially; requires prompting	Unable to respond to questions effectively

1. SOAP is an XML-based protocol used to exchange structured information between web services.
2. WSDL is an XML document that describes the functions and methods of a web service.
3. API is a set of rules that allows different software applications to communicate.
4. XML Schema defines the structure, elements, data types, and rules of an XML document.
5. A web service enables applications to communicate and exchange data over a network.
6. REST is an architectural style for designing web services using HTTP methods.
7. A protocol is a set of rules that defines how data is transmitted between devices.
8. An endpoint is a specific URL through which a web service can be accessed.
9. A service is a software function that performs a specific task for applications.
10. SOAP is a protocol using XML, while REST is an architectural style using HTTP.
11. WSDL describes a web service's operations, messages, data types, and communication details.
12. JSON is a lightweight data format commonly used to send and receive data through APIs.
13. HTTP is used to transfer requests and responses between clients and web servers.
14. A request is sent by the client, and a response is returned by the server.
15. XML provides a structured and platform-independent format for storing and exchanging data.
16. An API endpoint provides a specific URL for accessing a resource or operation.
17. HTTP is unencrypted, while HTTPS encrypts data for secure communication.
18. RESTful services follow REST principles and use HTTP methods like GET, POST, PUT, and DELETE.
19. An XML namespace uniquely identifies elements and prevents naming conflicts.
20. The client sends requests, while the server processes them and returns responses.
